

Code Alpha Internship Under Domain UI / UX Design

Name: Lobhas Mahesh Kulkarni

Date: 17/06/2026 **Day:** Wednesday

TASK 2: High-Fidelity UI Design

1. Convert the wireframe into a high-fidelity UI design.
2. Add colour palettes, typography, buttons, icons, and images.
3. Ensure the design follows UI/UX principles.

Foody Express – High-Fidelity UI Design

Introduction

Foody Express is a mobile food delivery application designed to provide users with a convenient and efficient way to order food from nearby restaurants. The project focuses on creating a modern, user-friendly, and visually appealing interface that simplifies the entire food ordering process.

This high-fidelity design transforms the initial wireframes into polished user interface screens by incorporating colours, typography, images, icons, and interactive design elements. The goal is to enhance user engagement while maintaining a seamless and intuitive user experience.

Project Overview

The Foody Express application enables users to browse restaurants, explore menus, add food items to their cart, complete the checkout process, and receive order confirmations. The high-fidelity design demonstrates how the final application would look and function, ensuring consistency, usability, and visual appeal.

The design follows a user-centered approach, focusing on simplicity, accessibility, and ease of navigation.

Objectives

The primary objectives of this project are:

1. Create a visually appealing mobile application interface.
2. Improve user interaction through intuitive navigation.
3. Establish a consistent design language across all screens.
4. Simplify the food ordering and checkout process.
5. Enhance the overall user experience through modern UI principles.

Design Process: The design process involved converting low-fidelity wireframes into detailed high-fidelity screens. Visual elements such as colour palettes, typography, icons, food imagery, and interactive components were incorporated to create a realistic representation of the final product. Special attention was given to maintaining consistency across screens and ensuring that users can easily navigate through the application.

Design Features

User Authentication: Provides secure login and registration functionality for users.

Home Dashboard: Displays food categories, restaurant listings, promotional offers, and search functionality.

Restaurant Menu: Allows users to browse menu items, view prices, and add products to their cart.

Cart Management: Provides an overview of selected items, quantity controls, and pricing information.

Checkout Process: Enables users to review delivery details, payment methods, and order summaries before placing an order.

Order Confirmation: Displays successful order placement details, estimated delivery time, and tracking options.

Screens Included

1. Login & Registration Screen
2. Home Screen
3. Restaurant Menu Screen
4. Cart Screen
5. Checkout Screen
6. Order Confirmation Screen

Figma Design and Prototyping

The entire Foody Express user interface was designed using Figma. High-fidelity screens were created by applying modern UI design principles, including consistent typography, colour schemes, spacing, icons, and high-quality food imagery. Reusable components and design elements were utilized to maintain visual consistency across the application.

Figma's prototyping features were used to connect screens and simulate the complete user journey. Interactive flows were created for user authentication, restaurant browsing, menu exploration, cart management, checkout, and order confirmation. The prototype provides a realistic representation of how the final application would function and enables stakeholders to visualize user interactions before development.

Key activities performed in Figma include:

1. Creating high-fidelity UI screens.
2. Designing reusable components and layouts.
3. Applying typography and colour systems.
4. Incorporating icons and food imagery.
5. Building interactive screen transitions and navigation flows.
6. Developing a clickable prototype for user experience demonstration.

Tools Used

1. **Figma** – High-fidelity UI design and prototyping.
2. **Microsoft Word** – Documentation and project reporting.
3. **PDF** – Final project submission and sharing.

Conclusion: The Foody Express high-fidelity design successfully demonstrates a complete food delivery application experience. By combining functionality with modern visual design principles, the project delivers an intuitive and engaging user journey from login to order confirmation. The final design effectively showcases a user-friendly and visually appealing food ordering experience.
